INTRODUCTION.

In January, 1902, Mr. Theodore M. Davis undertook a systematic exploration in the Valley of the Tombs of the Kings for the benefit of the Service des Antiquités. This location being within the jurisdiction of the Inspector-

FIG. 1. PROCESSION OF WORKMEN REMOVING THE ANTIQUITIES
AFTER THE OPENING OF THE TOMB.

General of the Services des Antiquités, I undertook the direction of the explorations. After consulting with M. Maspero, the Director-General, and Mr. Davis, it was decided to carry out excavations in such a manner as to thoroughly exhaust the small valley running west from Tomb No. 3 (see Map, p. vi), continuing the work right up to the sheer cliff. These

excavations were commenced in January, 1902, and resulted in minor discoveries, already chronicled in the Service's "Annales." In the first part of the excavations there was found in the débris, some way up the valley, a small fragment of an alabaster vase, bearing the cartouche of Thoutmôsis IV, which led me to believe I was in the near neighbourhood of the tomb of that king. In January, 1903, the work had reached the base of the cliff, where there were distinct signs of artificial working, and eventually the opening of a tomb was found (see Map, p. vi, No. 43). Here, in the débris, many fragments of antiquities turned up, and, among others, the end of a wooden axe-handle, bearing the name of Thoutmôsis IV. This at once led me to believe that the tomb discovered belonged to this Monarch, and, in clearing down to the surface of the rock, I came upon two small holes which contained complete, undisturbed, sets of foundation deposits bearing the name of the king.

On the 18th January, 1903, the door of the tomb was sufficiently cleared to permit entrance. Unfortunately Mr. Davis had sailed for Assuan, and being unable to reach him by telegraph, I concluded to enter the tomb and make an examination of its contents. I invited Mr. Robb. de P. Tytus to accompany me in my inspection.

After removing the remaining rubbish that covered the entrance, we found that it had been closed with roughly-cut stones, through which we made a small hole to enable us to pass. We then entered, accompanied by the head Reis, finding a passage partially filled with rubbish and strewn with broken antiquities. This immediately indicated to us that the tomb had been anciently plundered. Sliding down the passage over the rubbish for about 30 metres, we found ourselves over a gaping well obstructing further progress. Here we were obliged to wait until our eyes became accustomed to the dim light of our candles before we could see the further side or bottom. Gradually there loomed before us the opposite wall, in which we saw an opening had been cut, and, on finding that the well was very deep, we sent for ladders and ropes. Looking around us we saw that the upper part of the walls of this well were painted with scenes in which the cartouche of Thoutmôsis IV figured prominently. Here was, at last, final evidence of the true ownership of the tomb. Ropes and ladders having been procured, we with difficulty descended on the one side of the well and ascended on the other (the well having but little rubbish in it), and succeeded then in entering through the hole into a rectangular hall with two columns. Fastened round the nearest column to this opening was an ancient cable rope made of palm fibre, knotted at intervals, and with its end hanging down and reaching

to the bottom of the well. Here was further evidence of plunderers. This chamber was practically clean and contained but few antiquities, save some unimportant pieces and an inscribed paddle of a boat. In the left-hand corner of this chamber we found a staircase leading into a sloping passage about 20 metres in length, which gave access to a small square chamber. This passage was partially filled with rubbish, which made our descent difficult, stones rolling down at every step.

The chamber we found to be painted with similar scenes to those of the well, with the addition of two hieratic inscriptions on the right-hand wall. Here, again, was a large mass of débris. In the far corner of the left-hand side we found a doorway, partially blocked up with stones, which had been covered with plaster and sealed. Here there were evidences of double

FIG. 2. LID OF SARCOPHAGUS AS FOUND.

sealing, there being two distinct seal impressions: one, the original, showing a jackal over nine prisoners, the other evidently later, because on a different plaster and giving the cartouche of the king Horemheb.

Entering through this doorway we found ourselves in a long-shaped pillared hall, the floor of which was covered with rubbish and strewn with antiquities. At the inner end, between the two last columns, we found a short flight of steps leading to the sarcophagus, which was fully inscribed with texts and the king's name. Its lid, which lay beside it, was supported

by slabs of stone under three corners, while under the fourth was a beautifully-modelled wooden cow's head (see fig. 2).

On looking into the sarcophagus we found it to be empty, save for two wooden figures, cast in by the ancient plunderers. Turning round and ascending the steps between the two last left-hand columns, the body of a magnificent chariot loomed before us, and beside it the gauntlet of the king (see Plan, p. xxviii, *ch.*). On either side of this hall were two chambers, which we entered and examined in turn.

The first of these (see Plan, p. xxviii, D and fig. 3) we found to contain a mass of broken blue-glazed faience vases and figures of exquisite colour, and in the right-hand corner, resting in an erect position against the wall, was a

FIG. 3. INTERIOR OF SIDE CHAMBER D.

denuded mummy of a boy, whose stomach and cage had been ripped open by the ancient plunderers with a very sharp knife (see fig. 3).

The second chamber (see Plan, p. xxviii C) proved to contain fragments of broken jars, with their sealings, and great quantities of grain reduced to chaff.

In the third chamber (see Plan, p. xxviii B) there was a great mass of mummified joints and geese specially prepared for the use of the king's *ka* (see fig. 4).

The fourth chamber (see Plan, p. xxviii A) was empty, save for a mass of mummy linen-bindings, which had probably belonged to the small mummy found in the first chamber, and this was, perhaps, the place where the plunderers had unrolled it.

All these chambers had originally been shut up and sealed, but in no case was a door or stone left in place. The whole tomb was itself in an unfinished state, the objects therein being scattered about all over the floors, and there were remains on stones of oil wicks left by the ancient violators. We then returned to the entrance, and reclosed the tomb, leaving necessary guards to protect it.

After reporting all these facts concerning the discovery and state of the tomb, on the 3rd February, 1903, Mr. Theodore M. Davis, accompanied by M. Maspero and friends, officially opened it, and made a thorough inspection. It then became my duty to make an inventory of its contents and to ensure its safety: in this work Mr. Percy E. Newberry lent me his valuable assistance.

FIG. 4. INTERIOR OF SIDE CHAMBER B.

It is interesting to note that, amongst the antiquities found in the rubbish outside the tomb, there was a small wooden cartouche bearing the name of Thoutmôsis I, and a scarab seal of Queen Hâtshopsitû. In the foundation deposits occurred an alabaster saucer, bearing the name of the Queen Hâtshopsitû, usurped by Thoutmôsis IV, and inside the tomb were fragments of usurped alabaster vases of Thoutmôsis III and Amenôthes II. Besides these, there was also a fine piece of a garment of Amenôthes II in woven tapestry, richly ornamented.

ON
 THE LIFE AND MONUMENTS OF THOUTMÔSIS IV,

I.—PARENTAGE.

THOUTMÔSIS IV, who entitles himself on his monuments  "The Horus, Mighty Bull, whose diadems are firmly established,"

FIG. 5. THOUTMÔSIS IV AND QUEEN TIÂA.

, "Lord of the two Goddesses of the South and of the North, Stable in his Kingdoms as Toumon," , "The Golden Horus, Powerful of Sword, Destroyer of the barbarians," .

“The King Manakhpérouia,” , “Son of the Sun, Thoutmôsis Khâkhâou,” was the son of Amenôthes II, whom he succeeded. An inscription in the tomb of a certain Harmhabi at Cheikh Abd-el-Gournah expressly states that this Pharaoh was his father,¹ but for a long time there was complete ignorance as to his mother’s name, until it was conjectured that she was called Tiâa. Two statuary groups are, however, now known to us, in which this queen is represented seated by the side of Thoutmôsis IV, the inscriptions on which inform us that she was *the principal royal wife whom he loves* and *the royal mother*.² Before this double discovery it had been inferred, from an inscription in the tomb of Zanni, at Cheikh Abd-el-Gournah, in which she is entitled *royal wife* only,³ that she was the wife of Thoutmôsis IV.⁴ But it at once became evident that the presence of the epithet, *royal mother*, on the statues which represent her seated by the living Thoutmôsis IV is inexplicable on the assumption that she was the latter’s wife, for the only actual king of whom she could be mother was he by whom she is represented sitting, *i.e.*, Thoutmôsis IV, and this fact has been recognised by the most recent historians of Egypt.⁵ If we put side by side the epithets applied to this queen on the various monuments, we see that she is alluded to as *king’s daughter*,⁶ *principal royal wife*,⁷ *principal royal wife, royal mother*,⁸ and if we fill in these royal titles from the time in which she lived, we see that she must have been the royal daughter of Thoutmôsis III, the principal royal wife of Amenôthes II, and the *royal mother* of Thoutmôsis IV. Now another queen, Hâtshepsouïtou II Marîtri, comes before us under exactly similar conditions. We know that she was the wife of Thoutmôsis III and the mother of Amenôthes II, and the monuments entitle her *great royal wife who loved him, royal mother*.⁹ The resemblance

between the two protocols justifies us in concluding that the latest interpretation given to that of Queen Tiâa is the correct one, and that she really was the mother of Thoutmôsis IV, and not his wife.

We know for certain then that Thoutmôsis IV was of royal blood on his mother's side as well as by his father. But was he the natural heir to the throne? A tomb at Cheikh Abd-el-Gournah, that of Hekernehah, represents, with Thoutmôsis IV, royal sons whose names are effaced, but who none the less seem to have been brothers of the sovereign.¹ They must have been younger brothers or of inferior rank, the offspring of slaves or foreign women. We nowhere encounter any trace of an elder brother, or of a younger one holding in virtue of his mother, superior rights. Nevertheless, it is possible that Thoutmôsis IV was not always heir presumptive to the throne, and that, until he entered the period of adolescence, his chance of succeeding his father was but a remote one. This, at least, is what I am inclined to infer from the terms of the inscription which he himself set up between the paws and against the breast of the Great Sphinx at Gizeh, the materialised image of the god Harmakhis. This inscription was discovered in the year 1818, in the course of Captain Caviglia's excavations round the Sphinx,² and the text was published very soon afterwards by Young.³ Vyse republished it twenty-two years after, but with the addition of several errors.⁴ Lepsius brought out another transcript of it with different mistakes, and minus several fragments, which had disappeared since the time of the discovery.⁵ Birch was the first to attempt an explanation of portions of it in Vyse's work of 1842, and thirty years later Brugsch translated into German the last lines, those which are of historical interest.⁶ The only two complete versions extant are those of Birch⁷ and of Mallet,⁸ both in English. The importance of this document, both historically and with special reference to the dynastic succession, was recognised for the first time in the second volume of my *Histoire Ancienne*.⁹

The good god, the son of Toumou, the champion of Harmakhis “the Sphinx,¹ the life of the Lord of All,² the all-powerful fabricator of the “perfect flesh of Khopri,³ the Being beautiful of face as the sovereign his “father, He who in his goings out is furnished with his insignia bearing “the diadems of Horus on his head, King of the North and the South for “the gods, very gracious to the divine Enneade ; He who purifies Heliopolis, “who strikes for the castle of Ptah,⁴ who presents Mait to Toumou and who “raises her towards Risanbouï,⁵ who establishes the rites of daily sacrifices “to the gods, who fulfils all that is and is the being whose *first act*, , “set going *for the first time* the whole creation, when springing forth from “Nou he came at the voice of the demiurge who summoned him ; who “searches for all that may be of service to the gods of the South and of the “North,⁶ who builds their temples of white stone and establishes the bread of “their offerings, the legitimate son of Toumou, Thoutmôsis, whose risings are “as the risings of Râ, flesh of Horus on the throne of this god Manakhpêrouria, “giver of life !

“Now at the time when his Majesty was an infant like Horus who was a “child at Khebit, when his beauties were such as those [of Horus] the “champion of his father, when his aspect was like that of the god himself, “when the soldiers shouted for joy for love of him, when all the royal

² Osiris.

³  *Ouarou-sapou*, is only imperfectly rendered by the term “All-powerful.”  *sapou* signifies the moment in which an act is accomplished and the act of accomplishing it ; the *sapouou* of a being, man or god, are the successive moments of his acts. A god or man is called *Ouarou-sapouou*, or “Chief, great in acts,” when the acts which he performs are decisive not only for himself but also for those who depend or proceed from him. Here the king, identified with the creative deity, is *great in acts* because he makes the flesh of the Sun, and thus causing him to rise, becomes the primary cause of all the phenomena which were produced on the primeval chaos by the rising of the sun.

⁴ Literally, “striking, striking, by the castle of Ptah,” that is to say, he who undertakes constructive works for Memphis.

⁵ *Risanbouï*, “South of his wall,” is the name of a quarter of Memphis and of the god Ptah who inhabits it.

⁶ The first member of this phrase  *iri nit nibe*, shows the king rendering to the gods all that had been given them by his predecessors and which actually existed. The second  *lehoui Khouït*, presents him to us as searching for an occasion for new foundations which would be his own particular work.

“ children and all the princes were under the spell of his valour because of
“ his exploits, for he also had run his course round the world¹ and his
“ victories are like those of the son of Nouît [; at that time], he was
“ beating the country² (for his diversion on the mountain of Memphis, from
“ the South to the North,³ shooting at a target with darts of iron, chasing
“ lions and gazelles on the mountains, driving in his chariot [drawn] by
“ horses fleetier than the wind, with one or other of his servants, unknown to
“ all the world ; then, when the hour came to grant a siesta to his servants,
“ [betaking himself] to the favourite region of Harmakhis⁴ by the side of
“ Sokaris in the necropolis of Rannoûtît, of the male gods and of the mother-
“ goddesses in heaven, of the mother [divine regent] of the gods of the North,
“ the lady of the wall of the South, of Sokhit, the lady of Khasit,⁵ the great
“ talisman, the mysterious place of the first manifestation for the gods of
“ Khriahou,⁶ the divine path of the gods towards the western horizon of
“ Heliopolis, namely the Sphinx of Khopri the Very-great who reposes in that
“ place, the great in souls, the mysterious in terrors⁷ the moment that shadows
“ fall upon him, towards whom come the palaces of Memphis and the whole
“ locality on either side of it, their arms raised in adoration to his face and
“ with offerings for his double.

“ One of these days it happened that the royal son, Thoutmôsis, having
“ come to walk towards the south, and being seated in the shadow of this
“ great god, a dream of sleep seized him at the moment when the sun was
“ shining on the brow [of the Sphinx], and his majesty found that this god
“ was speaking to him with his own mouth, as a father speaks with his son,
“ saying : ‘ Behold me, then ; contemplate me, my son Thoutmôsis, for I

¹ Literally, “ he had re-iterated the circle.” The sun circles victoriously round the world ; the king, who is identified with the god, *re-iterates his course*, that is to say, conquers the world.

² Literally, “ he made campaign.”

³ Literally, “ on his route, South and North.”

⁴ The phrase is troublesome, but if we compare it with what follows we see that the preposition \ominus *r* depends on the idea expressed by the verb *satoutou* ; the king *walked* as far as, *towards* the place where was the Sphinx. The word *satpou* which precedes the name of the god has no determinative ; it is, I believe, a derivative from the root *satapou*, “ to choose,” here, “ the chosen place.”

⁵ Khasit is the desert, by preference the Libyan desert, east of the Canopic branch of the Nile.

⁶ Babylon in Egypt. Of course it is the Sphinx who is designated by the name of talisman, etc., and it is curious to find, at this epoch, ideas analogous to those expressed by Arab writers concerning the Sphinx.

⁷ Cf. the name of Abou'l Hol, *the father of terrors*, which is given to the Sphinx by the neighbouring Arabs.

“ am thy father Harmakhis-Khopri-Râ-Toumou, and I will grant thee to be
“ king upon my throne, prince among the living, wearing the red crown and
“ the white crown on the throne of Gabou, the chief of the gods possessing
“ the earth in its whole length and its whole breadth, the splendour of the
“ eye of the lord of all ; revenues at thy disposition from the territory of
“ Egypt, large tributes from every foreign country, and a long term of years
“ during which thou shalt be the elect of Râ,¹ my face being towards thee,
“ while thy [face] shall be towards me and thy heart towards me. Now,
“ consider my destiny, so that thou mayest protect my perfect members.
“ The sand of the desert has invaded me, that upon which I am : I have
“ determined to cause thee to execute that which is in my heart² for
“ thou art my son, my champion ; draw near, I am with thee, I am thy
“ father.’ When the prince heard these words he marvelled, and he knew
“ that they were the words of this god. He kept silence in his heart
“ the temples of this region present their offerings to this god.”

Thus, at first, Thoutmôsis IV was styled *royal son* merely, and not *eldest royal son*, as are the princes who were heirs presumptive to the throne, such, for example, as Amenmasou, son of Thoutmôsis I,³ or *royal son and heir*, as Ramses II, son of Seti I,⁴ Amenhiouamif, son of Ramses II,⁵ Seti II, son of Menephtah,⁶ or *eldest royal son*, as Amenhikhopshouf, son of Ramses II,⁷ and Phrâhiouamif, son of Ramses III.⁸ The omission of all epithets seems to show that he was merely a prince with no immediate hope of succeeding his father. It is this circumstance which invests his dream with the aspect of a prophecy ; the god promises to make him king if he on his side will promise to rid the Sphinx of the sand which encumbered him. Before this revelation the prince remained silent, which was, no doubt, the best course for him to pursue. The opening of the history of Sinouhit tells us of the terror which seized upon that prince when an accident had rendered him

¹ Literally, “ a duration of the elect of Râ, great in years.”

² Literally, “ I have turned about *sanouî* to make that thou shouldst do that which is in my heart.”

master of a state secret ; he fled on overhearing the recital to his brother Ousirtasen of the circumstances of the death of their father Amenemhait II.¹ I think we may infer, from the facts mentioned above, first, that Queen Tiâa was not heiress in her own right, but only a secondary princess, like, for example, Maoutnofrit, of Thoutmôsis I, the mother of Thoutmôsis II ;² secondly, that her son, prince Thoutmôsis, was not heir to the throne at the time of his prophetic dream quoted on the stela of the year I ; thirdly, that he was probably rather far removed from the throne, since a divine intimation was necessary to enable him to ascend it.

If, as the autopsy made by Drs. Smith and Keatinge seems to indicate, he was about twenty-five at the time of his death,³ he must have been between fifteen and eighteen at the time of his accession. This, however, is a question the answer to which awaits further medical discussion.

II.—THE WARS OF THOUTMÔSIS.

The reign of Thoutmôsis IV was peaceful. Nubia and the Soudan had been indissolubly united to Egypt by Ahmôsis and by Amenôthes I, Syria had been reduced to the status of an Egyptian province, and relations had been entered into with the States beyond the Euphrates by Thoutmôsis III. Amenôthes II had quelled the few insurrections which had broken out at the death of his father, and since that time there had been no serious uprising against the Egyptian domination. The empire over Asia and Africa was firmly enough established to render any great efforts on the part of the sovereign superfluous. A little cleverness and prudence was all that was wanted to enable him to maintain the state of things instituted by his predecessors.

In the south his activity was not great. Like all the Pharaohs of the second Theban Empire, he had from time to time to suppress incursions of desert tribes. It is to this that allusion is made in general terms in the inscription on one of the architraves of the temple of Amada, where he is entitled "the good god, the truly vigorous one who crushes Koush and has

“abolished its frontiers as though they no longer existed.¹” An inscription in a Theban tomb fixes the limit of the Southern Empire at Kalai, and says that the king went as far as there.² We have but few precise dates. The first occurs on a stela on the rocks of Konosso, and is of the year VII, the third month of Pirit, the day 8. The sovereign is represented standing in the centre of the picture with the *pskhent*-crown on his head, raising his battle-axe above two kneeling prisoners, whom he holds by the hair. Behind him stands Queen Araît, in the rôle of protecting deity, her left hand raised, her right holding the mace, and hanging at her side ; on her head are the cap and two tall feathers of the goddess Maout. The two divinities to whom the king is offering in sacrifice the two prisoners are, the one Doudoun, Lord of Nubia, to whom he owes his sovereignty over the nomads ; the other, Khasou, the Lord of the West, who grants him all foreign countries.³ Owing to the loss of the greater part of the inscription, we are unfortunately not able to say who were the two chiefs thus executed, nor to what tribes they belonged.

The second date belongs to the following year, and is found on a stela engraven on a rock at Konosso, in the neighbourhood of the first. The inscription is long, and the only copy of it which we possess up to the present is not altogether satisfactory ;⁴ the general drift of it, however, is fairly clear. It relates how : “In the year VIII, the third month of Pirit, the day 2. “Behold, while His Majesty was in the city of the south at the town of “Karnak, his two hands purified with running water, and while the king was “making offerings to his father Amon, because the latter had made him king “for ever and established him for ever on the throne of Horus, news was “brought to His Majesty : ‘The Negro is invading the regions of Ouauait ; “he has proclaimed a revolt against Egypt, and has gathered around him all “the vagabonds of other countries.’ The king having gone peacefully to the “temple about the time of morning, and having made a great offering to the “father who had created his graces, this is how His Majesty himself prayed “before the prince of the gods, consulting him upon the opportunity of going “himself, praying that he would reveal his intentions to him and guide him “in the right course, so that he might do what was pleasing to his double, “like as a father in relation to his son to whom he has given himself “as a protecting wall for him.

“in search of his prey, and he found the miserable negroes in a hidden
“valley known to no one. Now, as soon as the people had fled to this
“distant mountain with their slaves, their cattle and all their
“forage” One line only is missing, which warrants us in inferring
that the surprise of the Negroes in the mountains of the East marks the end
of the campaign.

Summing up the data supplied by this inscription, we see firstly, that Thoutmôsis IV went forth from Thebes ; secondly, that he arrived at Esneh, then at Edfou ; thirdly, that it was on leaving Edfou that he took the field, across the mountain of the East, that is to say, in the regions which extend between the Nile and the Red Sea ; fourthly, that the surprise of the Negroes in an unknown valley is the grand exploit of his campaign, and put an end to the state of things of which he had been told ; fifthly, that it was in celebration of this event that he erected the stela of the year VIII in the island of Konosso. To put it briefly, the expedition consists of a raid into the desert which begins at Edfou and finishes beside Assouân. What the scribe has depicted with so much bombast is simply a clean sweep

of the bands of marauders who had been harassing the subject tribes of Ouauaït and, perhaps, the frontiers of Egypt. The mention of Edfou as the last station in the valley seems to show that the king took the route of Redésiéh; how far into the desert he went it is difficult to say. The indications he gives of the distant and unknown ouady, where the marauders were cut off with their families, their cattle, and all their forage, might apply to such ravines as that of the Ouady Abrak. The king did not go as far as the Red Sea, for had he done so he would have mentioned the fact. He must have reached Assouân either by the road followed by Golénischeff in 1889, or by one of the almost parallel tracks mentioned by Floyer in his work on the Etbaye.¹

Is it to one of these two military excursions, or is it to a third expedition, posterior or anterior, that reference is made in the inscription mentioned by J. de Morgan as being situated on the rocks a little to the west of those of which we have just been speaking, but of which he only describes the initial scene?² It seems more probable that this refers to a third expedition; but nothing short of the publication of the text can settle the question, when anyone can be found ready to go to the almost inaccessible rocks on which it is engraved to make a copy.

The so-called wars of Thoutmôsis IV, then, in the country of the South, resolve themselves into a few raids against marauding tribes between the Nile and the Red Sea, sometimes as far as Southern Egypt, sometimes as far as Nubia. The representation graven on the body of the chariot,³ therefore, which depicts him charging masses of foes, is a merely conventional scene designed to render visible to the eye the action of the sovereign in the South as a parallel to his action in the North. The list which we find on the right side of the interior of the chariot, and which comprises a selection of southern tribes, is thus worded: 1. ; 2.  Kalai; 3.  Miëou; 4.  Ilima; 5.  Courases, or Kolosso; 6.  Diouraik, where Kalai represents the traditional limit of the empire on this side.

It does not seem that Thoutmôsis IV had occasion to imperil his life in the North any more than in the South. The pictures traced on the body of the

² J. de Morgan, *de la Frontière de Nubie à Kom-Ombo*, p. 68. M. de Morgan confuses this inscription with the one which Lepsius has published, and which is of the year VII; a comparison of the scenes shows us that they are two different inscriptions.

chariot of the crushing and taking prisoners of the Syrians, has no more real significance than has that which represents the war against the Negroes; it is simply a common motif of Egyptian decoration. The list given on the left side of the interior of the chariot is likewise a general list, having no particular application to any determinable act of war. It comprises

1.  Naharina; 2.  Sangara; 3.  Tounipa;
4. , the Shasu; 5.  Kadshi-Kadesh; 6.  Tikhisa;

this latter no doubt in memory of the victories of Amenôthes II. It will be noticed that the name of the Khati does not appear: the Khati at that time not playing a sufficiently important part in Syrian politics to cause them to be enumerated in abridged lists of the northern peoples. The relations between Egypt and the neighbouring nations, the Mitanni and the Babylonians, seem to have been uninterruptedly pacific. A letter written by Doushratta, King of Mitanni, to Amenôthes IV, recalls the fact that Thoutmôsis IV asked of Artatama, grandfather of Doushratta, one of his daughters in marriage, and that Artatama consented to the marriage at the seventh asking.¹

The allusions to Syrian campaigns which we meet with here and there in the Theban tombs or on private stelæ refer, therefore, not to great wars like those of Thoutmôsis III and of Amenôthes II, but to partial revolts, or to acts of brigandage in the vast territory which depended directly on Pharaoh in Asia. Thus we find an Amenôthes who was high priest of Anhourî, saying that he followed his lord into the countries of the South and of the North, when he went to Naharina and to Kalai, that is to say, to the regions of the Euphrates on the one side and the plains of Sennar on the other.² It is probable that the sovereign made at least one expedition into Asia, and that it is to this visit to the Syrian provinces that reference is made in the mention of a first campaign in a region of which the name is almost entirely effaced, but may easily be restored to Naharina. He brought back from there the booty which he shared with his father Amomra. The enumeration of the treasures granted to the god fills a long inscription graven on the east side

² Sharpe, *Egyptian Inscriptions*, 1st Series, pl. 93, ll. 5, 6. It has been said (Budge, *A History of Egypt*, Vol. IV, p. 79) that the scribe Zanni speaks of a campaign of Thoutmôsis IV in Zahi. The passage alluded to applies to the reign of Thoutmôsis III and not to that of Thoutmôsis IV: with regard to Thoutmôsis IV, Zanni merely states that he served him, without mentioning in what country.

of the wall built round the obelisk of Hatshopsouïtou, on the east of the great hypostyle-hall at Karnak.¹

Summing up the above, we see that, neither in the North nor in the South, did Thoutmôsis IV have to undertake any campaigns comparable to those of his grandfather, or even his father.

III.—THE ADMINISTRATION, THE MONUMENTS AND THE FAMILY OF THOUTMÔSIS IV.

The tombs of the Theban functionaries who lived or died under Thoutmôsis IV are particularly rich in information as to the higher administration of Egypt. That of Zanni, one of the scribes who wrote the *Annals* of Thoutmôsis III, shows us the operations of numbering the people and of recruiting the army under Thoutmôsis IV.² The same operations are figured in the tomb of Harmhabi, with scenes depicting the envoys of foreign princes, Asiatic and African, bringing presents from their masters to Pharaoh.³ Nothing in these representations is peculiar to the time of Thoutmôsis IV; they depict the usages and customs common to the whole of the XVIIIth Dynasty, and there is, therefore, no necessity for dwelling upon them here.

Thoutmôsis IV was not a great builder: he carried on the works of his predecessors apparently without any great activity, and he began no work of any importance; this fact, no doubt, is connected with the shortness of his reign. Thebes, as we should have expected, is the town in which has been preserved the greatest number of his monuments. He completed there certain portions which had been begun by Thoutmôsis I. and Thoutmôsis III,

¹ Mariette, *Karnak*, Pl. 33 and text, pp. 56, 57. Naharina is the most probable restoration for that time. Brugsch (*Geschichte Egyptens*, p. 393) restores Kheta, which is not so likely to be correct at that time, since Kheta does not figure on the list given on the chariot (see p. xxiii); he speaks, nevertheless, of "des ersten Feldzuges des Königs gegen das Land Cheta." Petrie (*A History of Egypt*, Vol. II, p. 168) has adopted the restoration suggested by Brugsch, and inserted it in his text, without perceiving that it makes double play with the probable campaigns to Naharina.

amongst others that near the fourth pylon ; these were afterwards restored, and the cartouches of the king re-cut by the first Ethiopian king of the XXVth Dynasty, Shabakaou.¹ The excavations of the winter 1902—1903 have proved that his labours in this locality were more considerable than had previously been supposed. Not only did he build this gate of the fourth pylon, but he re-touched the walls, paved the ground, and placed statues there. It was there that M. Legrain found in January, 1903, the charming group now in the Cairo Museum, which represents him seated by the side of his mother Tiâa (see Fig. 5, p. XIII). When verifying the paving-stones and turning them up to see that they did not rest on still older constructions, we were surprised to find that the blocks of which they are composed were taken from a building of Amenôthes II. On them are depicted some very curious scenes which are evidently the prototype of the representations of the triumph of Seti I ; the stones found up to the present figured the return of Amenôthes into Egypt, and the sacrifice of the chiefs whom he had taken prisoners before Amon. We are tempted by certain indications to think that the bas-reliefs had been used as materials for a pavement by Thoutmôsis IV, which may mean that the monument to which they belonged was either left unfinished at the death of the sovereign or destroyed by his successor. The hypothesis of a destruction by Thoutmôsis IV is very unlikely, in view of what we learn from other monuments regarding his sentiments towards his father. Moreover, M. Legrain found in the month of February of this year the lower part of the famous stela, in which Amenôthes II recounts his Syrian campaign ; the two last lines, the only ones which are approximately intact, state that Thoutmôsis IV has completed his father's stela. It is most unlikely that he would have shown himself so pious in one direction and be so impious in another.

Besides Thebes, the Saïd and Nubia have still some fragments of buildings bearing the name of Thoutmôsis IV. At El Kab he began the small temple which was completed by his son, Amenôthes III.² He also carried on works on the island of Elephantine, whither his military raids seem to have led him several times.³ The temple of Amada, whose reconstruction had been undertaken by his father, occupied him considerably, and his name may be read there on the architecture as well as in the interior of the

halls.¹ In Middle Egypt and the Delta his name rarely appears ; the only work of any importance by him which we know of in these regions is the clearing of the Great Sphinx. He dug away the sand in which it was buried up to the neck, and erected against its breast the stela which we translated above ;² that was the least he could do for the god who had made him king.

We know little about his family. The names of two only of his queens—Arait and Moutemouaou—are given on the monuments. The reading, Arait, for the name written  is, to say the least of it, doubtful : it is the current transcription of the sign of the common uræus, but here we might read the name of one of the uræus-goddesses, Rannouit or Maritsakro, for example.³ She was a princess of high rank, for she was *royal daughter*, *royal sister*, *great royal wife*, and this is all we know about her. The same cannot be said of another of the wives of Thoutmôsis IV, she who was the mother of Amenôthes III. This queen was not called *royal daughter*, hence it is probable that she was not a member of the royal family. The son born of this union, Amenôthes, was, however, heir to the throne, and it was in order to legitimize his elevation that, according to the customary usage, a intervention on the part of Amonrâ has been supposed ; the god came down to the queen in the likeness of Thoutmôsis, united himself to her and disappeared, leaving her enceinte of a child of pure solar blood, who re-established the purity of the race. The question has lately been raised whether Moutemouaou was not the wife of Amenôthes II, and consequently, if Amenôthes III was not the brother, rather than the son of Thoutmôsis IV. The answer to this question is given on the monuments. At Luxor, in the scene of the theogamy, it is stated that the god Amon came towards the queen under “the form of the Majesty of this husband Thoutmôsis IV.”⁴ At El Kab Amenôthes III states that he completed the little temple as “a monument of his father Thoutmôsis IV.” The terms are sufficiently explicit to expel all doubts : Thoutmôsis IV was certainly the husband of Moutemouaou and the father of Amenôthes III.

² See p. XVI-XVIII of the present volume.

³ Mr. Petrie thinks that the uræus “may be merely an ideograph signifying *the goddess-queen*, and designates Mutemua” (*A History of Egypt*, Vol. II, p. 170). He says “that this is all the more probable, since the supposed Arat was *great royal wife*, like Mutemua” (*id.*, p. 174).

⁴  Gayet, *Le Temple de Louxor*, Pl. LXXI, fig. 205, in the *Mémoires de la Mission française*, Vol. XV.

Of other children that he may have had we know one only, a prince Thoutmôsis, who is mentioned on a scarab on an inscription in the island of Schel.¹ Was this the prince who, dying a little before or at the same time as his father, was deposited in one of the secondary vaults of the hypogee, and whose mummy, violated already in antiquity, was re-discovered standing against the wall? It seems to be that of a child from six to eight years old, and this uncertainty as to age prevents us from knowing whether this prince was older or younger than Amenôthes III.²

The reign of Thoutmôsis IV lasted nine years and eight months only, if we are to believe the tradition handed down by Manetho.³ The date of the year VIII, which has been preserved for us in the stela of Konosso,⁴ is within the limits indicated by the tradition. The figures in the Greek lists, however, are generally speaking so inexact, that we must not repose too great confidence in them. We will merely say, therefore, that his reign was short, and that it lasted about a decade, without more specific mention of the number of years. When it closed the child of Moutemouaou was still very young, and his mother must have exercised the regency, at any rate nominally during his minority. This is in fact what we are given to understand by the titles which Amenôthes III gives to his mother in the temple of Luxor. He calls her: "the sovereign princess, very gracious, sweet of love, mistress of "all the countries, mistress of the South and of the North, the Royal mother "Moutemouaou."⁵

PLAN AND SECTIONS OF THE TOMB OF THOUTMÔSIS IV.

DESCRIPTION OF THE TOMB AND SARCOPHAGUS OF THOUTMÔSIS IV,

BY

PERCY E. NEWBERRY.

GENERAL DESCRIPTION OF THE TOMB.

THE tomb of Thoutmôsis IV is cut out of the living rock, beneath one of the steep limestone cliffs which line the eastern side of the valley of the Biban el Molük at Thebes (see Map, p. vi, Tomb No. 43). The descent into it is made by a flight of steps cut in the floor of a small natural platform at the base of the cliff. In this platform, immediately in front of the tomb, are two shallow holes, which contained the foundation deposits buried in sand (see Plan and Sections, p. xxviii, F, D). The entrance doorway is without any architectural features, and leads directly into a long sloping passage, which gives access to (1) a steep flight of steps with long narrow recesses on either side, and (2) another long sloping passage. At the end of this second sloping passage is a doorway leading directly into a large square well, having a small and low Rectangular Chamber at the bottom of its eastern side. In the inner side of the well, high up in the wall, is cut a doorway, which leads to a Rectangular Hall (marked 1 on the Plan, p. xxviii), the roof of which is supported by two square pillars arranged longitudinally along its axis. Cut in the floor of the left-hand inner corner of this hall is a steep flight of steps leading down through (1) a sloping passage and (2) another steep flight of steps, with very narrow recesses in the walls on either side, to a doorway giving access to a Rectangular Anti-Chamber (marked 2 on the Plan, p. xxviii), with low, flat ceiling and well-finished walls. Leading out of this chamber from a doorway cut in its left-hand wall and near its inner end, is a Large Rectangular Sepulchral Hall (marked 3 on the Plan, p. xxviii), the high ceiling of which is supported by two rows of three square pillars each, arranged longitudinally on either side of its axis. At the inner end of it, immediately behind the

third row of pillars, the floor has been sunk to a depth of about one metre, and access is obtained to this lowest part of the tomb (marked 4 on the Plan, p. xxviii) by a flight of five steps cut in the rock between the two last pillars of the hall. In the centre of this sunken part rests the sarcophagus on slabs of stone in a roughly-hewn and very shallow hole. On either side of the hall are small doorways (two on either side) leading to small and low-ceilinged rectangular chambers (marked on the Plan A, B, C, D, p. xxviii).

It is probable that wooden doors were used to close the different compartments of the tomb, but these have all been stolen by the ancient plunderers, and no evidence remains of them except their socket holes and a wooden lintel to the doorway of Chamber A. After the doors had been shut they were roughly sealed round their edges with mud-plaster. In the case of the entrance to the first Rectangular Hall the doorway was completely walled up with stones, which were carefully faced with plaster and coated with a layer of fine stucco. This final layer was then coloured grey, and a painted scene was begun upon it, so as to conceal all traces of the opening to the burial chambers behind, and thus deceive would-be violators of the sarcophagus and robbers of the contents of the tomb. The entrance to the Large Rectangular Sepulchral Hall containing the Royal Sarcophagus was also walled up, and then plastered over, but the plaster, in this case, was stamped all over by a large stamp-seal bearing the design of a jackal over

nine prisoners, arranged in three rows: . It is important to note

that before the seal was pressed upon the plaster it was coated with blue paint, the surface of it was then wiped clean, leaving the colour only in the incised parts; it was then applied to the damp material, which consequently received, not merely an impression, but a *coloured* impression,¹ of the seal.

THE PAINTINGS.

Only two of the chambers of the tomb contain paintings: these are (1) the upper part of the Square Well, and (2) the Lower Rectangular Anti-Chamber (Plan, Chamber 2, p. xxviii). In both cases the walls have been

¹ We have here the earliest known instance of "block printing."

carefully smoothed and the surface prepared to receive the paintings by being coated with a thin layer of fine grained stucco. After this layer of stucco was put on the artist measured up the walls, prepared his scheme of design, and “flicked” his guiding lines by means of a string saturated with red paint.

SQUARE WELL. Ceiling. Ornamented with stars painted yellow on a blue ground to represent the sky at night.

Left-hand wall. Frieze, the usual *kheker* ornament, with row of coloured rectangles below. Beneath this frieze is a long and narrow \equiv -sign, extending the whole length of the wall, and coloured blue, with a single row of yellow stars upon it. Below are six scenes, showing gods and goddesses presenting symbols of life ($\frac{\text{Q}}{\text{T}}$) to King Thoutmôsis IV, each scene being accompanied by an explanatory inscription. Beginning on the left-hand side these scenes show :—

- (1) Thoutmôsis IV before Osiris, Khent-Amentiu.
- (2) Thoutmôsis IV before Osiris, Lord of Abydos.
- (3) Thoutmôsis IV before Anubis, the Great God, Lord of the Sacred Land.
- (4) Thoutmôsis IV before Hathor, Lady of the Western Desert.
- (5) Thoutmôsis IV before Hathor, Chieftainess of the Western Desert.
- (6) Thoutmôsis IV before Hathor, Lady of the Western Hill.

Inner wall. The painting covers only the left-hand end of this wall, and consists of the usual *kheker* frieze, an unfinished \equiv -sign, and an unfinished scene with only the figure of Anubis painted in. The remaining walls of this chamber are not painted.

LOWER RECTANGULAR ANTI-CHAMBER. Ceiling. Ornamented with stars painted yellow on a blue ground to represent the sky at night.

Left-hand wall. Frieze, the usual *kheker* ornament, with row of coloured rectangles below. Beneath this frieze is a long and narrow \equiv -sign, extending the whole length of the wall, and coloured blue, with a single row of yellow stars upon it. Below are four scenes, showing gods and goddesses presenting symbols of life ($\frac{\text{Q}}{\text{T}}$) to King Thoutmôsis IV, and each scene is accompanied by an explanatory inscription. Beginning at the left-hand side these scenes show :—

- (1) Thoutmôsis IV before Osiris, Khent-Amentiu.
- (2) Thoutmôsis IV before Anubis, Within the Temple.

- (3) Thoutmôsis IV before Hathor, Lady of the Western Desert.
- (4) Thoutmôsis IV before Hathor, Chieftainess of the Western Desert.

Below the scene is a plain dado, bordered above by yellow, red, yellow, and black bands, each band being divided by thick black lines.

Innermost wall (Fig. 6). Frieze, the usual *khoker* ornament with row of coloured rectangles below. Beneath this frieze is a long and narrow \equiv -sign, extending the whole length of the wall, and coloured blue, with a single row of yellow stars upon it. Below are five scenes, showing gods and goddesses presenting symbols of life (☉) to King Thoutmôsis IV, each scene

being accompanied by an explanatory inscription. Beginning at the left-hand side these scenes show :—

- (1) Thoutmôsis IV before Hathor, Chieftainess of the Western Desert.
- (2) Thoutmôsis IV before Anubis, Upon his Hill.
- (3) Thoutmôsis IV before Hathor, Chieftainess of Thebes, Lady of Heaven, and Mistress of the Two Lands.
- (4) Thoutmôsis IV before Osiris, Khent-Amentiu.
- (5) Thoutmôsis IV before Hathor, Chieftainess of Thebes, Lady of Heaven, and Mistress of the Two Lands.

Below the scene is a plain dado, bordered above by yellow, red, and yellow bands divided by thick black lines. The border of coloured rectangles enclosing the two ends of the scene are unfinished.

The remaining walls of this chamber are not painted.

HIERATIC INSCRIPTIONS.

Two hieratic inscriptions have been written in black ink on the unpainted plaster which covers the right-hand wall of the Lower Rectangular Chamber (Plan, Chamber 2, p. xxviii). Both inscriptions are written in bold and

THE SARCOPHAGUS.

THE SARCOPHAGUS.

SARCOPHAGUS.—Red Crystalline Sandstone.—Length 3 m.—Width 1·60 m.—
Height 2 m.—Chamber 4.

The Sarcophagus is hewn out of a solid block of stone in the form of a box: its lid being cut out of a separate piece. Both box and lid are rounded at the head and square at the feet. The upper side of the lid is of a curved form. The whole of the outer surface is covered with incised figures and inscriptions, painted in yellow, as follows:—

Lid. Down the centre of the lid is a vertical line of hieroglyphs reading:—

From this vertical line are eight horizontal bands of hieroglyphs (four on either side), written vertically and running from the centre to the edge of the lid and down the sides of the coffin. These lines read:—

HEAD OF THOUTMÖSIS IV.

THE PHYSICAL CHARACTERS OF THE MUMMY OF THOUTMÔSIS IV,

BY

G. ELLIOT SMITH.

THE body is that of a young, clean-shaven, effeminate, and extremely emaciated man, 5 feet 6 inches in height. It shows no sign of any ante-mortem injury; but both feet have been broken off at some time long after the body was embalmed, and the right leg was broken off at the knee-joint. A transverse abrasion on the front of the neck may have been produced at the same time as these other injuries. The body is so emaciated that all the ribs stand out as prominent ridges. The thorax shows a slight flattening in the region of the third right rib in front, but there is no evidence to show that this was the result of disease.

For purposes of embalming, the abdominal wall had been removed in the whole of the left iliac and part of the left hypogastric regions, leaving a large triangular opening measuring 11.5 cm. transversely, 10 cm. in the vertical direction, and 14 cm. along the third margin, which was parallel to and just above Poupart's ligament. The whole abdomino-thoracic cavity was tightly packed with cloth saturated with resinous embalming-material, which formed a very hard solid mass. A large mass of cloth was stuffed into the mouth of the opening in the abdominal wall. There was no trace of any of the viscera in the embalming-material, which filled up the whole body-cavity. It was also impossible to determine the cause of a large opacity, about the size of a fist, which made its appearance in the left side of the thorax in a skiagraph.

The body was lying in a fully-extended, prone position. The shoulders were slightly raised: the upper arms were placed vertically, and the forearms were crossed on the front of the chest, the right forearm being in front of the left. The hands were flexed in such a manner that they must (at the time

of embalming) have been grasping vertical rods, each about 1.5 cm. in diameter.

The skin is very dark and discoloured, so that it is not possible to form any accurate idea of its original colour.

The head has a very effeminate appearance, especially when seen in profile. The face is long, narrow, and ovoid: the chin is narrow, prominent, and somewhat pointed. The forehead has a most pronounced slope, and there is no projection in the region of the glabella or the superciliary ridges. There is no depression at the nasion, the line of the forehead (when viewed in profile) passing straight down into continuity with the anterior margin of the nose. The nose is relatively small, narrow, slightly aquiline, and delicately moulded. The lower margin of the septum nasi is very oblique.

Practically no distortion of the nose and face has occurred in the process of embalming: the nasal apertures are symmetrical and not dilated. The lateral cartilages are pushed outward to a slight extent beyond the nasal bones, and there is a pronounced median sagittal groove extending along the whole of the cartilaginous part of the nose.

The ears are small and well moulded: the lobules are fixed and, like those of Rameses II, have large perforations, so that each lobule is converted into a rounded cord. The lips are thin.

In *norma verticalis* the head presents the form called “*beloides aegyptiacus*” by Sergi. The cephalic (breadth-length) index is 77.7, so that it falls into the mesaticephalic group.

The skin of the forehead is transversely wrinkled just in front of the hair, but from its appearance it is a post-mortem change.

The hair of the head is slightly wavy, is about 16 cm. long, and is of a dark reddish-brown (henna-colour) tint: in front it has the appearance of having been parted slightly to the left of the middle line, but elsewhere it is matted together in a tangle of thick locks, which hang obliquely downward and backward on the side of the head. The colour of the hair is different to the dark brown tint which is usually found in the people of Egypt. Microscopic examination probably explains the meaning of this by revealing a mass of dark reddish foreign matter (? embalming material or possibly henna) studding the surface of the hair.

The eyebrows are moderately thick: they extend inward as a thinner group of hairs which meet across the middle line.

The moustache and beard were closely shaved. It was possible to recognise the cut ends of a fairly thick moustache, which was most dense

just above the angles of the mouth. There was also evidence of a thick patch of hair in front of and co-extensive with the auditory pinna, but over the masseteric and buccal regions the hair was very scanty. On the lower lip and the polished anterior surface of the chin it was impossible to find more than a very few scattered hairs; but on the under surface of the chin a small group of scattered hairs was visible. Neither on the neck, nor on the limbs and thorax could any hair be detected; and even on the pubic area it was impossible to find any certain traces of hair.

All parts of the surface of the body, including the somewhat diminutive genital organs, were well preserved. Circumcision seems to have been performed.

Eight of the upper teeth were visible after a small quantity of resinous embalming material had been removed. They were white, unworn, and in excellent condition. None of the lower teeth were visible, being hidden by the lower lip. The upper incisors were obliquely set, so that they must have projected over the corresponding lower teeth.

The delicate hands were extremely emaciated: this fact, together with the great length of the finger nails, made the fingers seem much longer and slenderer than they really were. The finger nails were long and narrow, and had not been trimmed for three or four weeks before death.

As the determination of the age of Thoutmôsis IV at the time of his death would afford evidence of considerable value to historians, a careful search was made for some indications on which to base an estimation. As the body had every appearance of being that of a young man, it seemed possible that an examination of the bony epiphyses might enable us to determine the age. Dr. Herbert Milton kindly enabled us to examine the skeleton by means of his Röntgen-ray apparatus. It was in this way demonstrated that the epiphyses of the long bones were fully-joined, and a direct examination of the ends of the tibia in the damaged right leg showed the perfect union of its epiphyses. Thus the man must have been 20 years of age at least, and probably more than 24 years. On the other hand, the examination of the crest of the ilium (both by the Röntgen rays and directly in the embalming-incision) showed that the epiphyses of the crest of the ilium was not fully joined. So that the body is most probably that of a man of not more than 25 years. And as the union of the epiphyses of the other bones seems to prove that the body is more than 24 years old, we cannot be far from the truth in assigning the age of 25 years to Thoutmôsis IV at the time of his death.

Catal. du Musée, n. 46001.

- 46003. Vase** [5].—Arragonite.—Height 0 m '065.—Diameter of top 0 m '05 ; diameter across base 0 m '035.—Plan, *f.d.*

[]-shaped vase, bearing a similar inscription to that of No. 46001.

- 46004. Saucer** [6].—Arragonite.—Maximum diameter 0 m '08.—Depth 0 m '02. Plan, *f.d.*—Plate II.

A shallow -shaped saucer, with an incised inscription on one side of its rim :

Beneath this inscription can be read another :

, showing that the vase had been originally intended for the tomb of Hatshopsouit, and that it was afterwards re-used by Thoutmôsis IV.

- **Saucer** [7].—Arragonite.—Maximum diameter 0 m '06.—Depth 0 m '02. —Plan, *f.d.*

A shallow -shaped saucer, with a roughly-incised inscription on its rim :

[Davis Collection.]

- **Saucer** [8].—Arragonite.—Maximum diameter 0 m '05.—Depth 0 m '02. —Plan, *f.d.*

A shallow -shaped saucer, bearing a similar inscription to that of No. [7].

[Davis Collection.]

- 46005. Pebble** [9].—Arragonite.—Length 0 m '08.—Breadth 0 m '05.—Plan, *f.d.*—Plate II.

An oval-shaped pebble, bearing the following inscription written upon it in black ink :

- 46006. Pebble** [10].—Arragonite.—Length 0 m '08.—Breadth 0 m '05.—Plan, *f.d.*

An oval-shaped pebble, bearing a similar inscription to that of No. 46005. The inscription is very faint.

- 46007. Model Chisel** [11].—Bronze blade with wooden handle.—Length of blade 0 m '04 ; length of handle 0 m '05.—Plan, *f.d.*—Plate II.

A small model chisel, with flat bronze blade and wooden handle of round section.

46008. **Model Chisel** [12].—Bronze blade with wooden handle.—Length of blade 0 m '06; length of handle 0 m '03.—Plan, *f.d.*—Plate II.

A small model chisel, with flat bronze blade and wooden handle of round section.

46009. **Handle of a Model Chisel** [13].—Wood.—Length 0 m '14.—Plan, *f.d.*

Handle of a model chisel, with the following inscription written upon it in black ink:

46010. **Model Axe blade** [14].—Bronze.—Length 0 m '05.—Maximum breadth 0 m '04.—Plan, *f.d.*—Plate II.

Model axe blade, in bronze, with the following inscription incised upon it:

46011. **Model Axe blade** [15].—Bronze.—Length 0 m '05.—Maximum breadth 0 m '04.—Plan, *f.d.*—Plate II.

Model axe blade, in bronze, similar to No. 46010, but without inscription.

46012. **Model Axe blade** [16].—Bronze.—Length 0 m '05.—Maximum breadth 0 m '04.—Plan, *f.d.*

Model axe blade, in bronze, similar to No. 46010, but without inscription.

46013. **Blade of a Model Adze** [17].—Bronze.—Length 0 m '06.—Breadth 0 m '02.—Plan, *f.d.*

Blade for model adze, uninscribed.

46014. **Handle of a Model Adze** [18].—Wood.—Length 0 m '13.—Plan, *f.d.*—Plate II.

Handle of a model adze, with the following inscription incised upon it:

46015. **Model Brick-Mould** [19].—Wood.—Length 0 m '135.—Breadth 0 m '065.—Plan, *f.d.*—Plate II.

Model brick-mould, composed of four strips of wood dovetailed together. Upon one side is roughly incised the following inscription:

46016. **Model Brick-Mould** [20].—Wood.—Length 0 m '17.—Breadth 0 m '08.
Plan, *f.d.*

Model brick-mould, similar to No. 46015.

46017. **Finger Ring** [21].—Blue glazed faïence.—Diameter 0 m '017.—
Plan, *f.d.*

A plain blue glazed faïence finger-ring, without bezel.

46018. **Cartouche-shaped Plaque** [22].—Blue glazed faïence.—Length
0 m '02.—Plan, *f.d.*

A small cartouche-shaped plaque, bearing the prenomen of Thouthmôsis IV :

46019. **Cartouche-shaped Plaque** [23].—Blue glazed faïence.—Length
0 m '02.—Plan, *f.d.*

A small cartouche-shaped plaque, similar to No. 46018.

46020. **Plaque** [24].—Blue glazed faïence.—Length 0 m '02.—Width 0 m '015.
—Plan, *f.d.*

A small plaque, with a kneeling ibex modelled in relief upon its upper surface.

46021. **Plaque** [25].—Blue glazed faïence.—Length 0 m '02.—Plan, *f.d.*

A small plaque in the shape of a lion's head. Flat below; modelled in relief upon its upper surface.

46022. **Plaque** [26].—Blue glazed faïence.—Length 0 m '02.—Plan, *f.d.*

A small plaque in the shape of a calf's head. Flat below; modelled in relief upon its upper surface.

46023. **Plaque** [27].—Blue glazed faïence.—Length 0 m '02.—Plan, *f.d.*

A small plaque, similar to No. 46022.

46024. **Plaque** [28].—Blue glazed faïence.—Length 0 m '02.—Plan, *f.d.*

A small plaque, in the shape of a human hand; modelled in relief upon its upper surface, flat below.

46025. **Plaque** [29].—Blue glazed faïence.—Length 0 m '02.—Plan, *f.d.*

A small plaque, similar to No. 46024.

46026. **Plaque** [30].—Blue glazed faïence.—Length 0 m '02.—Plan, *f.d.*

A small plaque, similar to No. 46024.

46027. **Plaque** [31].—Blue glazed faïence.—Length 0 m '02.—Plan, *f.d.*

A small plaque, similar to No. 46024.

46028. **Plaque** [32].—Blue glazed faïence.—Length 0 m '025.—Plan, *f.d.*

A small plaque, having on its upper surface a flying pin-tailed duck modelled in relief; flat below.

46029. **Plaque** [33].—Blue glazed faïence.—Length 0 m '025.—Plan, *f.d.*

A small plaque, similar to No. 46028.

46030. **Plaque** [34].—Blue glazed faïence.—Length 0 m '023.—Plan, *f.d.*

A small plaque, in the shape of a bivalve shell; slightly rounded above, flat below.

46031. **Plaque** [35].—Blue glazed faïence.—Length 0 m '023.—Plan, *f.d.*

A small plaque, similar to No. 46030.

46032. **Plaque** [36].—Blue glazed faïence.—Length 0 m '023.—Plan, *f.d.*

A small plaque, similar to No. 46030.

46033. **Plaque** [37].—Blue glazed faïence.—Length 0 m '025.—Plan, *f.d.*

A small plaque, in the shape of a lotus-flower; modelled in low relief above, flat below.

46034. **Plaque** [38].—Blue glazed faïence.—Height 0 m '025.—Plan, *f.d.*

A small plaque, similar to No. 46030.

46035. **Plaque** [39].—Blue glazed faïence.—Height 0 m '015.—Plan, *f.d.*

A small oblong plaque; rounded above, flat below.

2. THE CANOPIC JARS AND THEIR BOX.

- **Canopic Jar [1].**—Limestone.—Height 0 m ·395.—Maximum diameter 0 m ·17.—Chamber 4.—Plate III [1].

Lid of jar, carved in the form of a human head wearing a full wig. The face is well modelled, and the eyebrows, eyelashes and irides of the eyes are painted in black.

Jar, of the usual rounded form, hollowed out inside and with a vertical column of hieroglyphs running down the front. The hieroglyphs are incised, coloured blue, and divided from the rest of the jar by vertical incised lines, also coloured blue.

The inscription reads: 

The lid is perfect; the jar itself is broken into five pieces.

TECHNIQUE, fair.

[Davis Collection.]

- 46036. Canopic Jar [2].**—Limestone.—Height 0 m ·39.—Maximum diameter 0 m ·18.—Chamber 4.

Lid of jar, similar to that of the preceding [No. 1].

Jar, similar to that of the preceding, but with the following inscription incised upon it:

The lid is perfect; the jar itself is broken into several pieces.

TECHNIQUE, fair.

- 46037. Canopic Jar of the Prince Amenemhat [3].**—Limestone.—Height 0 m ·35.—Maximum diameter 0 m ·15.—Chamber 4.—Plate III.

Lid of jar, carved in the form of a human head wearing a full wig and “false beard, the latter painted blue. The hair of the wig is emphasised by incised parallel vertical lines. The face is well-modelled, and the eyebrows, eyelashes and irides of the eyes are painted in black.

Jar, of the usual rounded form, hollowed out in the inside and with an inscription of four vertical lines of hieroglyphs, divided from the rest of the jar by vertical and horizontal incised lines, forming a panel. The hieroglyphs are incised and coloured blue. The inscription reads:

The lid is perfect; the jar itself is broken into several pieces.

TECHNIQUE, good.

46037

(1)

46038. Canopic Jar of the Prince Amenemhat [4].—Limestone.—Height 0 m ·375.—Maximum diameter 0 m ·16.—Chamber 4.

Lid of jar, similar to that of the preceding No. 46037.

Jar, similar to that of the preceding No. 46037, but with the following inscription incised upon it:

The lid is perfect; the jar itself is broken into several pieces.

TECHNIQUE, good.

— **Canopic Jar of the Prince Amenemhat [5].—Limestone.—Height 0 m ·38.—Maximum diameter 0 m ·18.—Chamber 4.**

Lid of jar, similar to that of No. 46037.

Jar, similar to that of No. 46037, but with the following inscription incised upon it:

The lid is perfect; the jar is broken into several pieces.

TECHNIQUE, good.

[Davis Collection.]

46039. Canopic Jar of the Prince Amenemhat [6].—Limestone.—Height 0 m ·38.—Maximum diameter 0 m ·155.—Chamber 4.

Lid of jar, similar to that of No. 3.

Jar, similar to that of No. 3, but with the following inscription incised upon it:

The lid is perfect; the jar is broken into several pieces.

TECHNIQUE, good.

46040. Fragments of Canopic Jars of the Princess Thent-amen [7].—Arragonite.—Chamber 4.

Several small pieces of the lids of these jars were found; they were human-headed, and beautifully sculptured. A piece of the body of one of these jars bears the following vertical line of hieroglyphs, incised but not coloured:

TECHNIQUE, very good.

46041. Fragments of a box for Canopic Jars [8].—Arragonite.—
Chamber 4.

A large number of small fragments of an alabaster (arragonite) box for canopic jars was found, and some of these were inscribed. Unfortunately, these pieces were too fragmentary to permit of their being fitted together, but from them we gain sufficient evidence to assume that the box was similar in shape to the one found in the tomb of Aménôphis II (see Daressy, *Fouilles de la vallée des rois*, in *Catalogue général des Antiquités Égyptiennes de musée du Caire*, No. 5029, Pl. L).

3. THE FOUR MAGICAL FIGURES.

46042. **The Magical Figure of the Northern Wall** [1].—Painted Wood¹ with pedestal of sun-baked clay.—Height of figure 0 m ·185.—Dimensions of pedestal.—Height 0 m ·05.—Length 0 m ·157.—Width 0 m ·072.—Chamber 4.—Plate IV.

Figure carved in the form of a human mummy swathed in a winding sheet. The face is beautifully modelled, and painted yellow, with eyebrows and eyelashes emphasized by black lines, the eyes by white pupils and black irides. Upon the head is a long wig coloured black, and the winding sheet over the body is painted white. The figure is represented standing, and is fixed by a wooden peg into the

Pedestal of sun-baked clay. On the front of the pedestal is painted in white the word , while on the upper surface, immediately before the feet of the figure, are six horizontal lines of hieroglyphs giving the magical text from Chapter CLI (d) of the *Book of the Dead* :—

TECHNIQUE, very good.

46043. **Pedestal of the Magical Flame**² of the Southern Wall [2].—Sun-baked clay.—Height 0 m ·03.—Length 0 m ·16.—Width 0 m ·085.—Chamber 4.

Pedestal of sun-baked clay. On the front of it is painted in white the word , while on its upper surface, immediately before a hole in which the magical flame was fixed, are six horizontal lines of hieroglyphs, giving the following text from Chapter CLI (f) of the *Book of the Dead* :—

¹ Apparently of date-palm wood, thus agreeing with the rubric given in the papyri, which also states that the figure is to be seven fingers high. See Naville, in the *Proceedings of the Society of Biblical Archaeology*, Vol. XXV, p. 108.

² According to the rubric given in the papyri, the flame was a torch made of *uaa*-reeds.

46044. **The Magical Jackal of the Eastern Wall** [3].—Sun-baked clay painted.—Height of figure to tip of ear 0 m ·14.—Dimensions of pedestal.—Height 0 m ·042.—Length 0 m ·285.—Width 0 m ·085 Chamber 4. (Found in niche in left-hand end column untouched.)—Plate IV.

The Figure of the jackal is represented lying down, with its forelegs stretched in front, head and ears erect, and tail curled round its right side. The modelling of the animal is exquisite, and the figure appears to have been painted grey, with pupils of the eyes white and irides black. It is modelled directly on the top of the

Pedestal, which has been broken into three pieces.¹ On the front of it is painted in white the word , and immediately before the paws of the jackal were six horizontal lines of hieroglyphs painted in white, giving the magical text from Chapter CLI (g) of the *Book of the Dead*. Of this text only the following hieroglyphs have been preserved:—

TECHNIQUE, very fine.

46045. **Pedestal of the Magical *Ded*² of the Western Wall** [4].—Sun-baked clay.—Height 0 m ·038.—Length 0 m ·158.—Width 0 m ·073. Chamber 4.

Pedestal of sun-baked clay. On the front of it is painted in white the word , while on its upper surface, immediately before the holes in which the magical *Ded* was fixed, are eight horizontal lines of hieroglyphs painted in white, giving the following text from Chapter CLI (c) of the *Book of the Dead*:—

¹ The front piece is not shown in the photograph given in Plate VIII, 3.

² According to the rubric given in the papyri, this *Ded* had to be made of "crystal," the branches of which were to be of "gold." This would have made it a valuable object, and probably accounts for its having disappeared from the tomb.

WOODEN STATUETTES.

4. THE WOODEN FIGURES.

46046. **Statuette** [1].—Wood coated with bitumen.—Height 0 m '60.—Chamber 4.—Plate V.

Statuette of the king wearing the crown of Lower Egypt, a false beard, and the *shenti* loin-cloth suspended by a broad belt. The figure is shown slightly bending forward, the left foot is flat upon the ground and the right leg is stretched out behind, the toes only being on the ground. The left arm is stretched out in front of the figure as if in the attitude of holding an enemy by the hair, while the right arm is raised as if in the act of striking with a mace or battle-axe.

Badly mutilated. The left arm is wanting below the elbow, the left leg below the knee. The right leg is broken across about half way down the shin, but the lower piece is not shown in the photograph (Plate V).

The base on which the statuette was standing is lost.

46047. **Statuette** [2].—Wood coated with bitumen.—Height 0 m '61.—Chamber 4.—Plate V.

Statuette of the king wearing the crown of Upper Egypt, and clad in a short, plain loin-cloth. The figure is represented in the attitude of walking, with the left leg thrust forward. The right arm hangs down at the side; the left is raised from the elbow as if the hand held a sceptre.

Badly mutilated. The face is broken away and a piece of the left leg is wanting.

The base on which the statuette was standing is lost.

46048. **Statuette** [3].—Wood coated with bitumen.—Height 0 m '61.—Found in the well.

Statuette of the king wearing the crown of Lower Egypt, a false beard, and the *shenti* garment. The figure is represented in the attitude of walking, with the left leg thrust forward. The right arm hangs down at the side; the left is raised from the elbow as if a sceptre was held in the hand.

Badly mutilated. The left leg is broken across the middle of the shin, and the right leg is missing below the knee.

The base on which the statuette was standing is lost.

46049. **Statuette** [4].—Wood coated with bitumen.—Height of figure to forehead 0 m '29.—Chamber 4.—Plate V.

Statuette of the king wearing the same insignia and represented in the same attitude as No. 46048.

Badly mutilated. The left arm is wanting from the elbow; the left side of the face is broken away, and the top of the crown of Lower Egypt is broken and wanting.

The wooden pedestal is preserved; its dimensions are: Height 0 m '03, breadth 0 m '065, length 0 m '185.

- 46050. Statuette** [5].—Wood coated with bitumen.—Height of figure to forehead 0 m ·295.—Chamber 4.

Statuette of the king represented in the same attitude as No. 46048, but wearing the crown of Upper Egypt.

Badly mutilated. The left arm is missing from the elbow, and the left foot is wanting.

One side of the wooden pedestal is preserved. The dimensions are: Height 0 m ·03, length 0 m ·185.

- 46051. Two arms of a Statuette** [6].—Wood coated with bitumen.—Length of arm 0 m ·235.—Chamber 4.

Two arms from a standing statuette of the king. The right arm is shown as if it had been hanging down at the side of the figure. The left arm is raised as if the hand held a sceptre.

In fair preservation.

- 46052. Fragments of the left arm of a Statuette** [7].—Wood coated with bitumen.—Chamber 4.

Fragments of the left arm of a statuette of the king, similar to No. 46051, and of about the same proportions. The arm is raised from the elbow as if the hand had been holding a sceptre.

- 46053. Fragments of a Statuette** [8].—Wood coated with bitumen.—Length of face from forehead to chin 0 m ·08.—Chamber 4.

Seven fragments of the face, arms and feet of a statuette of the king. He is shown wearing a linen (?) head-dress wrapped tightly across the forehead and falling behind the ears on to the shoulders. To the chin was attached a false beard.

Badly mutilated.

- 46054. Fragments of a Statuette** [9].—Wood coated with bitumen.—Length of thumb 0 m ·10.—Chamber 4.

Four fragments of the hand and feet of a large statuette of the king.

TECHNIQUE, very fine.

- 46055. Statuette** [10].—Wood coated with bitumen.—Height 0 m ·54.—Chamber 4.—Plate V.

Statuette of the king, represented in the form of a mummy wearing a long wig falling over the shoulders and the breast. On the top of the head is a narrow hole, doubtless for fixing on the double-feathered crown.

Badly mutilated. The face is wanting; the body has been chipped in places and a piece broken away from the left side. The feet also are missing.

TECHNIQUE, poor.

- **Statuette** [11].—Wood coated with bitumen.—Height 0 m .54.—
Found in débris outside the tomb.

Statuette of the king, similar to No. 46055.

Badly mutilated. Face and left side partly decayed away.

[Davis Collection.]

- 46056. Statuette** [12].—Wood coated with bitumen.—Height 0 m .56.—
Chamber 4.

Statuette of the king, similar to No. 46055.

Badly mutilated. Face wanting.

- 46057. Face of a Statuette** [13].—Wood coated with bitumen.—Chamber 4.

Face of a statuette, with eyes painted white, pupils black and eyebrows green.

From the size of the face, the dimensions of the statuette must have been similar to No. 46055.

- 46058. Statuette** [14].—Wood coated with bitumen.—Height 0 m .35.—
Chamber A.

Statuette, in the form of a mummy, wearing the royal head-dress with twisted tail of hair at the back of the head. Over the forehead are the remains of a gilt uræus, and down the front of the figure is a vertical column of incised hieroglyphs giving the prenomen of Thoutmôsis IV: 

Mutilated. Feet wanting.

- 46059. Statuette** [15].—Wood coated with bitumen.—Height from chin to
bottom of feet 0 m .285.—Chamber 4.

Statuette, in the form of a royal mummy. Down the front of the figure is a vertical column of incised hieroglyphs giving the prenomen of Thoutmôsis IV:

Mutilated. Head, crown and feet wanting.

- 46060. Statuette** [16].—Wood coated with bitumen.—Height 0 m .28.—
Chamber 4.

Statuette, in the form of a mummy, similar to No. 46058, but inscribed down the front of the figure with a vertical column of incised hieroglyphs reading

Badly mutilated. Face and feet wanting.

- 46061. Statuette** [17].—Wood coated with bitumen.—Height 0 m '315.—Chamber 4.

Statuette, in the form of a mummy, wearing a full wig ending behind in a broad row of plaits. Over the forehead are the remains of a gilt uræus, and down the front of the figure are traces of an incised inscription giving the premen of Thoutmôsis IV.

Mutilated. Right arm broken away.

- 46062. Statuette** [18].—Wood coated with bitumen.—Height 0 m '28.—Chamber 4.

Statuette, in the form of a mummy, similar to No. 46061, but with a necklace in yellow painted *over* the bitumen, and with eyes and eyebrows outlined in yellow.

In fair preservation.

- 46063. Statuette** [19].—Wood coated with bitumen.—Length of face from forehead to chin 0 m '035.—Chamber 4.

Statuette, similar to No. 46058, with traces of an incised inscription down the front of the figure: .

Mutilated. The legs and feet are wanting below the knees.

- 46064. Statuette** [20].—Wood coated with bitumen.—Height 0 m '295.—Found in the sarcophagus.

Statuette, in the form of a mummy, wearing a close-fitting cap or short wig. Down the front of the figure is an incised inscription beginning: .

Badly mutilated. The face and right side of the head are wanting; the right arm, a piece of the left leg, and both feet are missing.

- 46065. Statuette** [21].—Wood coated with bitumen.—Height 0 m '56 from the tip of ear to sole of feet.—Chamber 4.—Plate V.

Statuette of the goddess Sekhmet. She is represented with lion head, wearing long wig, and seated on a solid wooden chair of the usual -type.

Mutilated. Base or pedestal wanting.

TECHNIQUE, fair.

- 46066. Panther** [22].—Wood coated with bitumen.—Length from tip of nose to rump 1 m '06.—Chamber 4.—Plate V.

Statuette, carved to represent a prowling panther, with two wooden pegs projecting from the back, and presumably belonging to a throne or some other piece of furniture.

Mutilated. The left fore-leg, right hind-leg and part of tail are wanting. Base or pedestal missing.

TECHNIQUE, very fine.

- 46067. Head of a Bird** [23].—Wood coated with bitumen.—Length from tip of beak to back of head 0 m '105.—Chamber 4.

Head of a bird of uncertain species.

- 46068. Goose** [24].—Wood coated with bitumen.—Length from tip of tail to breast 0 m '50.—Found in the sarcophagus.

Model of a goose, with curved neck.

Mutilated. Broken into three pieces. Legs and part of neck wanting.

TECHNIQUE, fair.

- 46069. Head of a Cow** [25].—Wood painted yellow.—Height 0 m '42.—Chamber 4.—Found beneath sarcophagus lid.—Plate V.

Head of a cow, carved in wood and painted yellow.

Mutilated. The horns, which were perhaps of metal, are wanting, and both eyes have been chipped out, probably in order to remove some metal inlay.

TECHNIQUE, good.

WOODEN PANEL.

TECHNIQUE: The panel is made of thin pieces of cedar wood dovetailed together and pinned with wooden pegs. The cutting of the figures and hieroglyphs is excellent.

PRESERVATION: Broken into five pieces and badly chipped in places.

[Davis Collection.]

— **Panel from the side of a Throne** [2].—Cedar wood.—Maximum height 0 m '25; minimum height 0 m '22.—Chamber 4.—Plate VII [2 and 2a].

Panel from the side of throne, with scenes and inscriptions carved on both surfaces in low relief.

Obverse. In the centre is a figure of Thoutmôsis IV, facing \Rightarrow , seated on a throne, which rests on the -sign. Upon his head he wears the crown of Lower Egypt, with uræus over the forehead. To his chin is attached a false beard, around his neck is a broad necklace, and girding his loins is a short kilt, ornamented with parallel lines. In his right hand he holds a flail, in his left the \uparrow -sceptre; above him is his name, \uparrow . In front of him, facing \Leftarrow , stands the lion-headed goddess  Urt-[hekau], represented in a long, plain, tight-fitting garment, and wearing a long wig and broad necklace. Upon her head is the solar disc, with pendent uræus hanging down over the forehead. Her right arm is upraised as if in the attitude of blessing the king. The left arm is bent from the elbow, so that the hand reaches up to the left breast, and in this hand she holds the \uparrow -sign. Behind her was a \uparrow -sign, reaching from the top to the bottom of the panel, but only the tip of this sign is preserved. Behind the king is a lotus-leaf-shaped fan, with papyrus-shaped handle and \bigcirc -ring at end; below this is a vertical line of hieroglyphs, reading: \uparrow . A narrow strip of the panel is wanting, and then comes a figure of the ibis-headed god Tahuti, facing \Rightarrow , wearing a short kilt ornamented with parallel lines, a long wig, and broad necklace. His left arm is thrust forward, and in his hand is a long wand reaching from top to bottom of the panel. The right arm is raised from the elbow to the breast, and in this hand he holds the \uparrow -sign, while in the angle formed by the bending of the elbow he holds up a long \uparrow -sign, which reaches from top to bottom of the panel.

Above him is the following inscription, written in two vertical lines: (1) , (2) . Behind him is a vertical column of hieroglyphs, reading:

Reverse. Thoutmôsis IV, as a human-headed lion, with hawk's wings, and tail upraised, facing \Leftarrow , treads beneath his feet the bodies of his fallen Nubian enemies. Flying

Obverse. Scene representing Thoutmôsis IV, facing \Rightarrow , clad in a short kilt ornamented with parallel lines, and wearing a broad necklace, seated on a throne in a light papyrus canoe floating upon the water. The head of the king is broken away; the two hands are raised to a level with the breast, and hold (1) the right, a \uparrow sceptre, and (2) the left, a flail. Before the king are his titles and prenomen:  and behind him his nomen: 
. The throne is of the usual \square -shape, and is ornamented with the -sign in the left-hand lower corner, and a scale pattern at the top and on the right-hand side. The papyrus canoe has two guiding oars supported by poles at the stern. The rim is ornamented with the common "rectangle" pattern.

Reverse. Similar to obverse, but scene faces \Leftarrow .

TECHNIQUE: finely carved in low relief.

PRESERVATION: broken into three pieces; the whole of the upper part missing.

46096. Fragments of the back of a Throne [5].—Cedar wood coated with stucco.—Chamber 4.—Two fragments shown in Plate VIII.

Eleven fragments of the back of a throne (?), with ornamentation modelled in fine stucco.

ORNAMENTATION: *Obverse.* So far as the ornamentation of the back of this throne (?) can be made out from the fragments that remain, we see that it consisted of (1) in the centre a large -sign in a panel of scales (see Plate XII, 5), with the words  written around the lower part of the *sam*-sign. This panel is enclosed by (2) a border of (a) disconnected coils and (b) "rectangles," separated on both sides from the rest of the ornamentation by lines having horizontal lines cutting across them. Outside this is (3) a panel ornamented with beadwork designs enclosing alternately (a) above, the titles, prenomen and nomen of Thoutmôsis IV, and (b) below, flowers and other devices. Above this panel, and probably extending along the whole breadth of the back, was another panel, the ornamentation of which consisted of two uræi facing one another, and supporting in front of them the names of Thoutmôsis IV in cartouches. Between the first two coils of the uræi are lotus flowers and buds with rosettes below, and beyond them, over the tail of the snake, were the extended wings of a hawk or vulture.

Reverse. The ornamentation of the reverse consisted of horizontal and vertical incised lines arranged in a manner not now apparent.

TECHNIQUE: very good.

7. THE CHARIOT.

ALTHOUGH the wheels and several other parts of the chariot are missing, through its having been broken up and partially destroyed by the ancient plunderers of the tomb, the fragments that remain, and the representations of the king's war chariot in the scenes modelled on the

THE CHARIOT.

framework of the "body," give us sufficient evidence to presume that it was constructed and composed of the following parts:—

- (1) The "body," consisting of a semicircular framework open at the back, and with a floor for the charioteer to stand on.
- (2) The carriage proper, *i.e.*, the axletree and the wheels.
- (3) The pole.

The body of the chariot was supported by the pole, which rested on the axletree, and, to steady it, it was strapped on either side of the axletree by bands of leather. It was placed as far back as possible, so as to take the weight of the charioteer, and thus relieve the pole and yoke, which served as a balance and means of harnessing the horses. The butt of the pole was dovetailed into a socket at the back of the body, and firmly secured by leather thongs to

the front part, and in order to prevent it slipping back, two straps were fixed into the rim and tied to the pole. The floor was made of leather meshwork, which, by its elasticity, answered the purpose of springs.

The axle and wheels were of wood; the latter were composed of eight spokes tired with metal, and secured to the axle by means of metal axle-pins.

The pole was of wood covered with leather. It was bent into an elbow at about one-fifth of its length from the end, and was supported by a wooden yoke.

FIG. 1.

The horses were yoked to the chariot by the following harness, made of leather, probably ornamented with leather bosses:—

- (1) The breast-harness, with girth and yoke-saddle.
- (2) The bridle, nose-strap, forehead-, three cheek-, and one neck-strap.
- (3) The reins, fixed to the nose-strap and passed through a loop attached to the breast-harness and girth.

We believe that the command of the horses was obtained simply by the nose-strap, and not by a snaffle or bit. A whip of leather with wooden handle was used by the charioteer to drive the horses.

Attached to the "body" of the chariot were, on the outside, a bow-case and two quivers, and, on the inside, a leather pocket or pouch with embossed flap to cover it.

46097. Body of the Chariot [1].—Wood coated with canvas, stucco, and fine linen.—Height 0 m '86.—Width 0 m '52.—Breadth 1 m '03—Chamber 3.—Plate IX, 1 and 2.

FIG. 2.

The body of the chariot is composed of a wood framework and panelling, the latter being covered with a canvas base for stucco, which is modelled with scenes and ornamentations in very low relief. The scenes consist of four panels, two inside and two outside, divided by an exceedingly decorative and ornamental design.

Outside. In the centre (see figures 1 and 2) is the nomen of Thutmôsis IV in a cartouche, surmounted by a Ra-sign and double ostrich feathers. In the space above is a lion-headed bird with wings opened, and holding in its claws two symbols of life; upon its head is the sun's disc, with the two pendent uræi. Before each uræus is a \bigcirc -sign. Below the cartouche is represented the ∇ -sign (symbol of joining), and to this is bound, according to the ordinary Egyptian convention,

papyrus plants and lotus lilies. Tied to the centre of the ∇-sign on either side is a row of kneeling Asiatic prisoners.

*Off-side panel*¹ (see Plate X). Thoutmôsis IV, armed with bow and arrows, rides, unaccompanied save by Mentu, the god of war, into the midst of his enemy's chariot corps, which he throws into a state of the utmost confusion, and at the same time overthrows and slays many of the charioteers.

FIG. 3.

The inscription explanatory of the scene is given in the five vertical lines above the horses of the king's chariot, and reads:

¹ The great reduction of the Plates X, XI, and XII necessitated the small detail being left out.

Hovering above the king is his protector, the goddess Nekhebyt, in the form of a vulture, holding in her talons the Q-ring. Thoutmôsis IV is represented standing in his chariot, and is in the act of shooting an arrow from a bow; at the same time he guides his horses with the reins tied round his body. Behind him stands the hawk-headed god Mentu, wearing on his head the sun's disc, two feathers, and uræus. He guides the king's hands, and assures the accuracy of the monarch's aim. The king wears the war helmet, with uræus in front; around his neck are two

FIG. 4.

strings of beads with decorative border. He is clad in a loin-cloth, which is supported by a broad belt, and his torso is swathed with leathern or cloth bands. He wears armlets on either arm, a leathern gauntlet on his forearm, and a bracelet on his right wrist. Slung over his shoulders are two quivers full of arrows. The chariot, which is of simpler decoration than the original, bears a quiver and bow case, and is drawn by two horses richly caparisoned, and wearing ostrich feathers upon their heads. the act of overthrowing consists of two distinct races of Asiatics, with pronounced Semitic features (for details and types, see fig. 4, and compare with the list given on the inside of the chariot). One of the tribes is characterised by long hair, pointed beard, and small moustachios; the hair is bound round the crown by a fillet; the features are large, the lips are thick, and there are signs of scoring on the cheeks; their garments were of richly-decorated tapestry-woven stuffs, and consisted of tight-fitting vests, either with or without sleeves, and short kilts fastened by leathern belts. The second tribe is characterised by shaven heads, long pointed beards, and small moustachios. The features are rather more refined than those of the first group, but are, nevertheless, strongly Semitic in type. Their

FIG. 5.

garments were also of richly-decorated tapestry-woven stuffs, and consisted of long-sleeved vests and long skirts reaching almost to the ankles, and fastened above by leathern belts. A distinctive feature of this tribe appears to have been their ornamented helmets, with long tassel (for specimen, see fig. 4). In several cases circular amulets are worn round the neck by representatives of both tribes (for specimen, see fig. 5). The armour of these foreigners apparently consisted of axes, daggers, and bows and arrows, with quivers, for offence, and rectangular shields for defence.

Near-side panel (see Plate XI). This scene is similar to that of the off-side panel, but the principal figures face the reverse way. The enemy that Thoutmôsis IV is

attacking is, in figuration, apparently the same as that represented on the off-side panel, but may possibly be meant to represent another Asiatic tribe. The king is here shown unaccompanied by the god Mentu, but he is draped in a similar uniform, and is overtaking two charioteers, whom he has just caught by the hair of their heads, and, abandoning the bow, uses his battle-axe. In the place of the protecting goddess Nekhebyt in the off-side scene, we have here a figure of the hawk-god Horus. In this panel two of the enemy are represented full face, and

FIG. 6.

another individual is shown clad in long close-fitting drawers (for detail, see fig. 6). The armour here again is like that of the former panel. The inscription above the scene is arranged in six vertical lines, and reads:—

PLATE XXVIII.

TAPESTRY-WOVEN FRAGMENTS.

TAPESTRY-WOVEN FABRICS.

THESE fragments¹ are of supreme importance in the history of tapestry-weaving. Bearing the cartouche of Amenôthes II, they are about 1000 years earlier in date than the oldest tapestry-woven fabrics hitherto known, viz., the fragments dating from about 400 B.C., found in the Crimea, and now preserved in the Hermitage at St. Petersburg. This superb workmanship proves that tapestry-weaving was in a high state of perfection in the reign of Amenôthes II, and the technique is most interesting. The texture is very fine for tapestry, the warp-strings numbering about sixty in the space of one inch. In the larger piece, these run vertically as one reads the hieroglyphs; in the smaller pieces, horizontally; in all three, they are looser in some parts than in others, to which the warp owes its undulative appearance. The weft is appreciably thicker than the warp, and the delicacy with which floral and other forms are rendered leaves no doubt that an upright loom was used. This is confirmed by the fact that the patterns are exactly the same on both sides, there being no "passings" or ends of threads visible, and probably the weaver sat in front of the loom instead of behind it. The warp bears evidence of having been relaxed or tightened at will, in places where its direction would aid the execution of the pattern—as in weaving the vultures, where the warps are curved to enable the wing, etc., to be more easily rendered. A loom in which the warp-strings are kept taut by a series of weights, instead of being fastened to a cylinder, would admit of this technique, and this was the principle of the Scandinavian and Greek looms. One of the latter is represented on a vase designed about 400 B.C. and found at Chiusi. In the smallest fragment, the forearm of the hieroglyph  resembles needlework in its execution, but most likely it has been woven by a method common in Coptic work. Another characteristic of Coptic tapestry is that the weft, instead of being at right angles to the warp, often crosses it obliquely to describe a curve. This is the method employed in executing the hieroglyph , the weaving being begun at the middle of the base and the form built up by a series of concentric layers of weft threads. Except for these instances, there is but little difference between the technique of these ancient fragments and the methods of our day. We can see, in the spaces between contiguous warps bearing different colours, the crossing stitch at intervals which, then as now, was necessary to prevent the fabric coming apart. The colours are red, blue, green, yellow, brown or black, and a grey. Of these, the reds and blues are very bright; the brown or black has perished, leaving the bare warp-strings, but, here and there, particles of it remain.—[W. G. THOMSON.]

46526. Portion of a Robe of Amenôthes II [1].—Linen.—Height 0 m .29.—Length 0 m .42.—Chamber 3.—Plate I [Frontispiece].

Portion of a white linen robe, with ornaments tapestry-woven in coloured linen threads. The designs consist of (1) eight rows of  lotus flowers in blue and red,

¹ For the following remarks we are indebted to Mr. W. G. Thomson, who studied the fragments with a view to writing a report on them.

alternating with  papyrus inflorescences in blue, red, yellow and brown outlined in black. To the left of these rows of flowers is (2) the prenomen  of Amenôthes II within a cartouche; on either side are crowned uræi delicately worked in blue, brown, black, red, and yellow coloured threads. On the left-hand side the uræus wears the red crown of Lower Egypt, on the right the white crown (outlined red) of Upper Egypt. Above the cartouche are given the titles of the king: . Below the cartouche is a large -sign beautifully worked in red, blue, green, and yellow coloured threads.

On the left-hand edge of this portion of the robe is a very delicately wrought border (0 m ·018 in width) of alternate lotus flowers and buds, divided from the rest of the garment by a row of fine black stitches of needlework. These flowers are tapestry-woven in red, blue, and green linen threads, the buds in red, brown, and black linen threads.

On the right-hand edge is a border (0 m ·018 in width) consisting of a double row of alternating truncated discs, tapestry-woven in red and blue linen threads, divided from the rest of the garment by black stitches of needlework. This edge of the robe has been strengthened by being "bound" with coarsish stitches in white linen thread.

46527. Fragment of a Garment [2].—Linen.—Height 0 m ·20.—Width 0 m ·085.—Chamber 3.—Plate XXVIII.

Fragment of a white linen garment, with a hieroglyphic inscription tapestry-woven in various coloured linen threads. The inscription, written vertically, reads:

46528. Fragment of a Garment [3].—Linen.—Height 0 m ·12.—Width 0 m ·035.—Chamber 3.—Plate XXVIII.

Fragment of a white linen garment, with the *ka*-name of Thoutmôsis III tapestry-woven in various coloured linen threads. The inscription, written vertically, reads:

46529. Portion of a Garment [4].—Linen.—Height 0 m ·46.—Length 0 m ·25.—Chamber 3.—Plate XXVIII.

Portion of a garment, coarsely woven in linen threads (warp 25 threads, woof 30 threads to 1 mm.), and divided vertically into fourteen narrow bands (each about 0 m ·018 wide) by thick double threads of linen dyed pink and woven into the material. The four bands on the right-hand side are plain, the remaining ten are ornamented with rosettes wrought in needlework, each rosette being composed of a pale green centre with six pale pink petals, except in the thirteenth row, where pink rosettes alternate with green petaled rosettes with pink centres.

PRESERVATION: much decayed.
